

Laporan Manual Book Frontend-User PWBS-TA-Kopikap

Sabda Adjie Saputra

Saya sebagai frontend user bertugas untuk mebuat tampilan untuk user, hal pertama yang saya lakukan adalah membuat template untuk header dan footer agar bisa di gunakan kembali untuk page yang lainnya. Pada tahap ini saya baru mengerjakan beberpa tampilan halaman dan perindahan halaman.

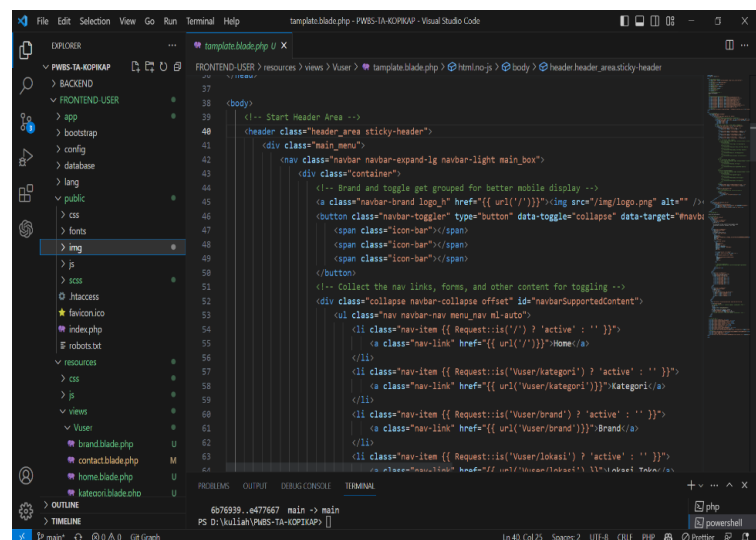

1. Tamplate.blade.php

Digunakan sebagai tamplate header dan footer yang akan digunakan kembali untuk page lainnya.

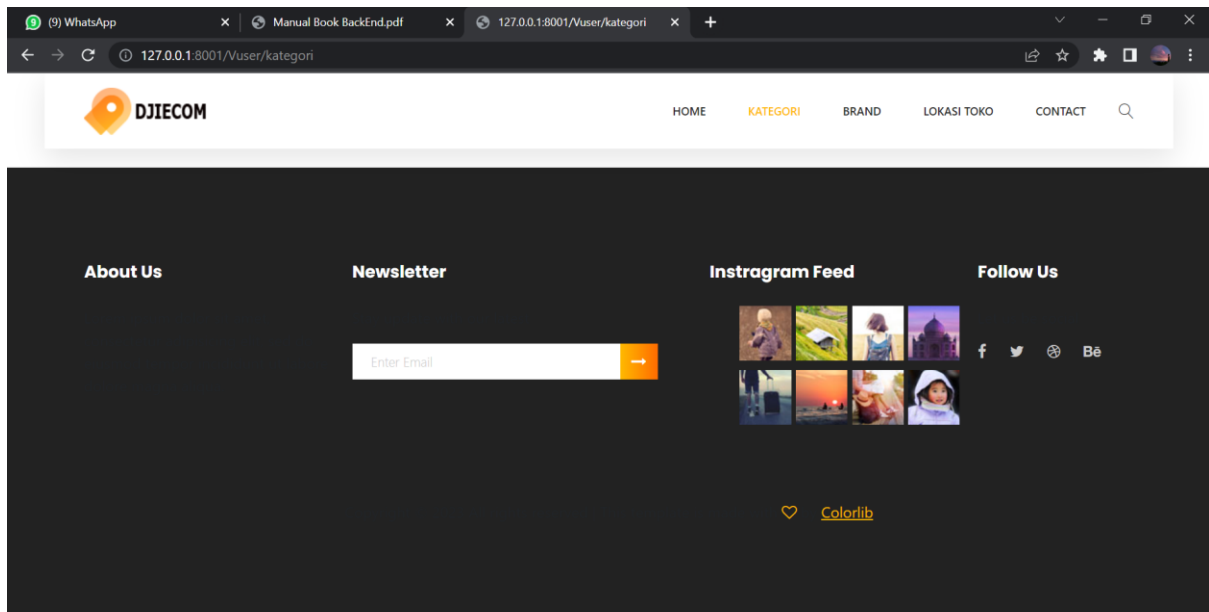

```
1 <!DOCTYPE html>
2 <html lang="zxx" class="no-js">
3
4 <head>
5     <!-- Mobile Specific Meta -->
6     <meta name="viewport" content="width=device-width, initial-scale=1, shrink-to-fit=no" />
7     <!-- Favicon -->
8     <link rel="shortcut icon" href="img/fav.png" />
9     <!-- Author Meta -->
10    <meta name="author" content="CodePikar" />
11    <!-- Meta Description -->
12    <meta name="description" content="" />
13    <!-- Meta Keyword -->
14    <meta name="keywords" content="" />
15    <!-- meta character set -->
16    <meta charset="UTF-8" />
17    <!-- Site Title -->
18    <!-- <title>Karma Shop</title> -->
19    @yield('title_template')
20    <!--
21    CSS
22    =====>
23    <link rel="stylesheet" type="text/css" href="{{asset('css/linearicons.css')}}"/>
24    <link rel="stylesheet" type="text/css" href="{{asset('css/font-awesome.min.css')}}"/>
25    <link rel="stylesheet" type="text/css" href="{{asset('css/themify-icons.css')}}"/>
26    <link rel="stylesheet" type="text/css" href="{{asset('css/bootstrap.css')}}"/>
27    <link rel="stylesheet" type="text/css" href="{{asset('css/owl.carousel.css')}}"/>
28    <link rel="stylesheet" type="text/css" href="{{asset('css/nice-select.css')}}"/>
```

Penaruhan file css,fonts,img dan js di direktori public

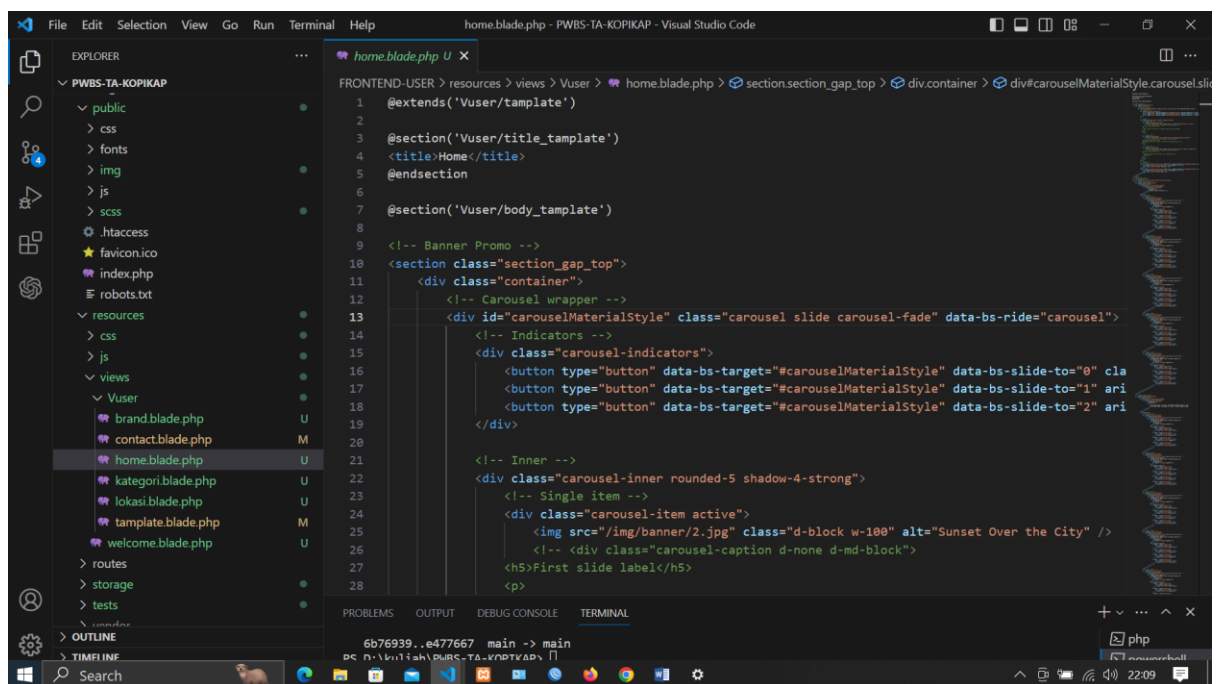

```
37 <body>
38
39     <!-- Start Header Area -->
40     <header class="header_area sticky-header">
41         <div class="main_menu">
42             <nav class="navbar navbar-expand-lg navbar-light main_box">
43                 <div class="container">
44                     <!-- Brand and toggle get grouped for better mobile display -->
45                     <a class="navbar-brand logo_h" href="{{ url('/') }}"></a>
46                     <button class="navbar-toggler" type="button" data-toggle="collapse" data-target="#navb
47                         <span class="icon-bar"></span>
48                         <span class="icon-bar"></span>
49                         <span class="icon-bar"></span>
50                     </button>
51                     <!-- Collect the nav links, forms, and other content for toggling -->
52                     <div class="collapse navbar-collapse offset" id="navbarSupportedContent">
53                         <ul class="nav navbar-nav menu_nav ml-auto">
54                             <li class="nav-item" <{{ Request::is('/') ? 'active' : '' }}></li>
55                             <a class="nav-link" href="{{ url('/') }}">Home</a>
56                             </li>
57                             <li class="nav-item" <{{ Request::is('User/Kategori') ? 'active' : '' }}></li>
58                             <a class="nav-link" href="{{ url('User/Kategori') }}">Kategori</a>
59                             </li>
60                             <li class="nav-item" <{{ Request::is('User/brand') ? 'active' : '' }}></li>
61                             <a class="nav-link" href="{{ url('User/brand') }}">Brand</a>
62                             </li>
63                             <li class="nav-item" <{{ Request::is('User/Lokasi') ? 'active' : '' }}></li>
64                             <a class="nav-link" href="{{ url('User/Lokasi') }}">Lokasi</a>
65                             </li>
66                         </ul>
67                     </div>
68                 </div>
69             </nav>
70         </div>
71     </header>
72
```

Hasil Template header footer yang sudah di buat yang nantinya akan di berikan perubahan kembali

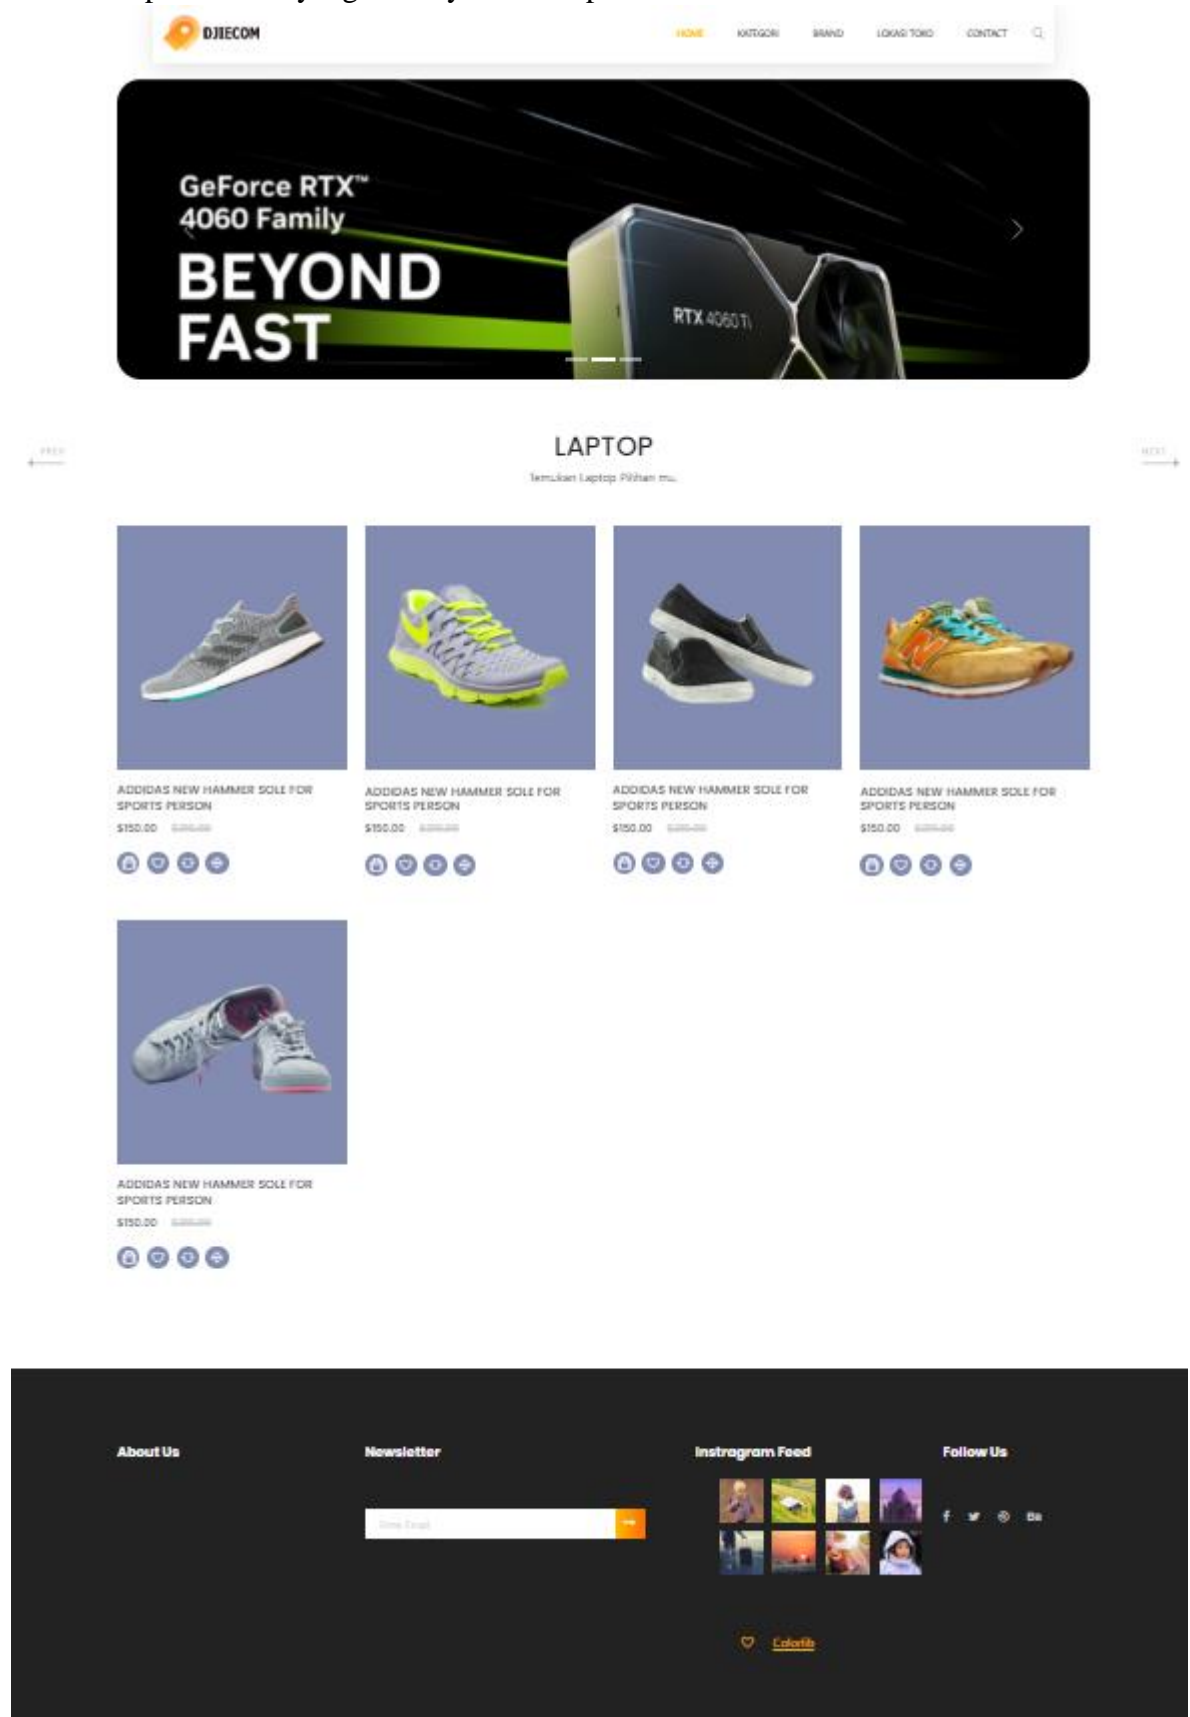

2. Tampilan Home

Selanjutnya saya membuat tampilan home yang akan digunakan oleh user untuk melihat produk

Hasil Tampilan home yang nantinya akan di perbaiki kembali

Selanjutnya saya mengerjakan tampilan contact

The image shows a Visual Studio Code editor window with the following details:

- File Explorer (Left Sidebar):**
 - Project: PWMS-TA-KOPIKAP
 - public
 - css
 - fonts
 - img
 - js
 - scss
 - htaccess
 - favicon.ico
 - index.php
 - robots.txt
 - resources
 - css
 - js
 - views
 - User
 - brand.blade.php
 - contact.blade.php (Selected)
 - home.blade.php
 - kategori.blade.php
 - lokalasi.blade.php
 - template.blade.php
 - welcome.blade.php
 - routes
 - storage
 - tests
- File Explorer (Bottom Left):**
 - main*
 - Git Graph
- Terminal (Bottom):**

```

```
- Language and Tools (Bottom Right):**
 - Ln 20, Col 63
 - Tab Size 4
 - UTF-8
 - CRLF
 - PHP
 - PowerShell

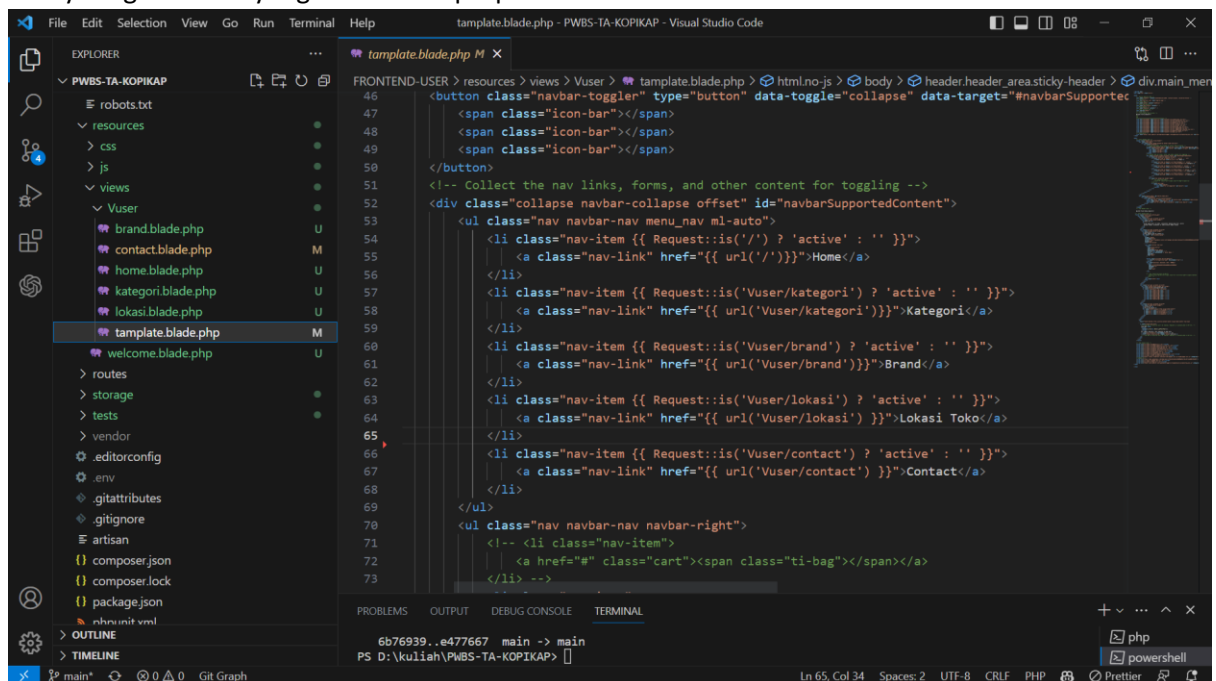

4. Setting Controller

Selanjutnya saya menyetting controller agar di navigasi header dapat berfungsi untuk perpindahan halaman dan menyetting halaman yang aktif

```
class ViewUser extends Controller
{
    // Perpindahan link
    function kategori()
    {
        // tampilkan view "env_karyawan"
        return view("Vuser/kategori");
    }
    function brand()
    {
        // tampilkan view "env_karyawan"
        return view("Vuser/brand");
    }
    function lokasi()
    {
        // tampilkan view "env_karyawan"
        return view("Vuser/lokasi");
    }
    function contact()
    {
        // tampilkan view "env_karyawan"
        return view("Vuser/contact");
    }
}
```

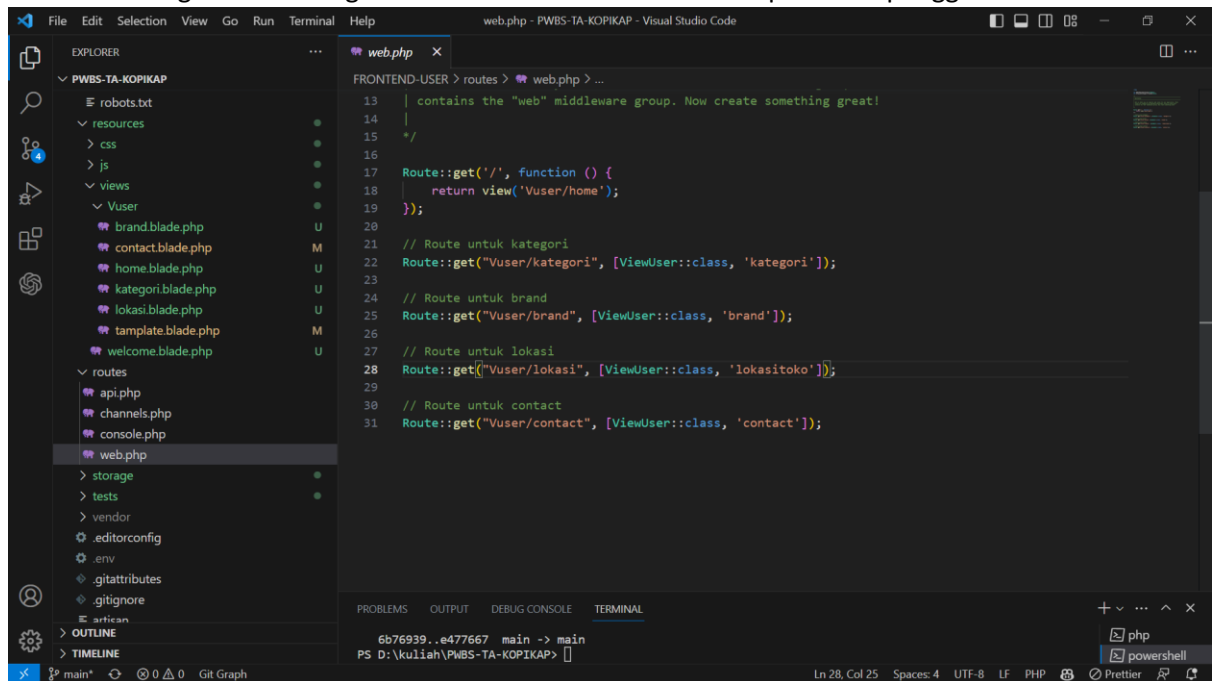

Menyetting halaman yang aktif ketika perpindahan halaman

```
<div class="collapse navbar-collapse offset id="navbarSupportedContent">
    <ul class="nav navbar-nav menu_nav m1-auto">
        <li class="nav-item {{ Request::is('/') ? 'active' : '' }}">
            <a class="nav-link" href="{{ url('/') }}">Home</a>
        </li>
        <li class="nav-item {{ Request::is('Vuser/kategori') ? 'active' : '' }}">
            <a class="nav-link" href="{{ url('Vuser/kategori') }}">Kategori</a>
        </li>
        <li class="nav-item {{ Request::is('Vuser/brand') ? 'active' : '' }}">
            <a class="nav-link" href="{{ url('Vuser/brand') }}">Brand</a>
        </li>
        <li class="nav-item {{ Request::is('Vuser/lokasi') ? 'active' : '' }}">
            <a class="nav-link" href="{{ url('Vuser/lokasi') }}">Lokasi Toko</a>
        </li>
        <li class="nav-item {{ Request::is('Vuser/contact') ? 'active' : '' }}">
            <a class="nav-link" href="{{ url('Vuser/contact') }}">Contact</a>
        </li>
    </ul>
    <ul class="nav navbar-nav navbar-right">
        <li class="nav-item">
            <a href="#" class="cart"><span class="ti-bag"></span></a>
        </li>
    </ul>
</div>
```

5. Setting Route

Routes berfungsi untuk mengatur lalu lintas file berdasarkan request dari pengguna.

The screenshot shows the Visual Studio Code interface with the 'web.php' file open. The Explorer panel on the left shows the project structure for 'PWBS-TA-KOPIKAP'. The main editor displays the following code:

```
13 | contains the "web" middleware group. Now create something great!
14 |
15 */
16
17 Route::get('/', function () {
18     return view('Vuser/home');
19 });
20
21 // Route untuk kategori
22 Route::get("Vuser/kategori", [ViewUser::class, 'kategori']);
23
24 // Route untuk brand
25 Route::get("Vuser/brand", [ViewUser::class, 'brand']);
26
27 // Route untuk lokasi
28 Route::get("Vuser/lokasi", [ViewUser::class, 'lokasitoko']);
29
30 // Route untuk contact
31 Route::get("Vuser/contact", [ViewUser::class, 'contact']);
```

The bottom panel shows the TERMINAL with the command prompt:

```
6b76939..e477667 main -> main
PS D:\kulliah\PWBS-TA-KOPIKAP>
```
